Day 1: Task 1

Please complete the below boxes on common laws and regulations that must be followed when working with customer data, use the below bulleted list to support your answers.

- What is it
- Why is it important
- Provide a real-world example of how you can follow it
- How does it impact working with data
- What could happen if you breached it

Data Protection Act	The Data Protection Act (1998 and significantly updated in 2018) is a law that governs how personal information is handled and safeguarded. It ensures individuals have control over their data and that organizations use it responsibly and it's crucial for protecting privacy and building trust between individuals and organizations. A real-world example of following this act is when a website asks for your consent before collecting your email address. This ensures you're aware of how your data will be used. The act impacts data work by requiring organizations to implement strong security measures, regularly review their data practices, and be transparent about how they use data. Failure to comply can lead to fines and reputational damage.
GDPR	GDPR (2016) is a European regulation that sets a high standard for protecting personal data. It applies to any organization that processes the personal data of individuals in the EU, regardless of the company's location. A real-world example is when a company based outside the EU asks for your consent to use your data for marketing purposes. GDPR requires them to obtain explicit consent and provide clear information about how your data will be used. GDPR impacts data work by requiring organizations to implement strong data protection practices, appoint a Data Protection Officer, and ensure data subjects have control over their data. Non-compliance can lead to fines and legal action.

Freedom of Information Act	<p>The Freedom of Information Act (2005) allows individuals to request access to information held by public authorities. It promotes transparency and accountability by giving individuals the right to know how public authorities operate. A real-world example is requesting information and CCTV recordings from a public authority. The authority is legally obliged to provide the requested information, promoting transparency in its operations. The act impacts data work by requiring public authorities to have clear procedures for handling information requests and to proactively publish certain information. Failure to comply can lead to legal action and reputational damage.</p>
Computer Misuse Act	<p>The Data Misuse Act (1990) specifically targets the unauthorized use of data, particularly when it harms individuals or organizations. It's designed to prevent misuse of personal information for malicious purposes. A real-world example is when someone steals your credit card details and uses them for fraudulent purchases. This act provides a legal-stand for victims to fall back to when such data misuse occurs. It impacts data work by requiring organizations to implement strong security measures and carefully monitor data access. Breaches can lead to legal penalties and fines</p>

Day 2: Task 1

Please research and complete the following tasks within the retail-sales_dataset.xlsx document, paste a print screen into the provided boxes below:

1. In the sheet 'retail_sales_dataset' add all available data between columns A –J into a 'table'
2. Using the 'filter' function, sort 'Age' to 'largest to smallest'
3. Using the 'SUM' function, show me the commission total in cell 'L10'
4. Using the 'AVERAGE' function, show me the average commission in cell 'L11'

Day 2: Task 2

Please research and complete the following tasks within the retail-sales_dataset.xlsx document, paste print screens into the provided box below:

Student name	English	Mathematic	Science	Average	Highest score	
Carol	75	85	85			
Ted	80	75	90			
Khan	85	75	80			
Harry	80	70	80			
Sarah	80	70	80			
John	65	80	70			
Linda	90	50	70			
Edward	55	80	60			
Mary	55	70	65			
Thomas	55	30	65			
Task						
1) Apply filter and sorting to show the best students in each subject.						
2) Calculate the average for all students and fill into Column E. (Use formula)						
3) Using the =MAX fucntion, tell me what the students highest score was in column F.						
4) Apply filter and sorting to show the best student in this classroom by average.						
5) Apply filter and sorting to show the best student in this classroom by highest score.						
6) Use conditional formatting to clearly identify the highest and lowest average scores

Grand Total	£ 70,617	United States

Day 3: Task 2

The dataset below tracks the sales performance of different products in various counties in England. Please paste the dataset into a blank Excel workbook. Your task is to:

- **Create a Pivot Table** to summarise the data by county and product.
- **Use the SWITCH function** to categorise products based on their sales volume.

Dataset:

County	Product	Sales Volume
Yorkshire	Laptops	500
Yorkshire	Smartphones	200
Cornwall	Laptops	700
Cornwall	Printers	400
Lancashire	Smartphones	150
Lancashire	Laptops	600
Essex	Printers	800
Essex	Smartphones	300
Durham	Laptops	250
Durham	Printers	300
Greater Manchester	Smartphones	600
Greater Manchester	Laptops	400

Step 1: Create a Pivot Table

- Select the dataset (columns A to C).
- Insert a Pivot Table to summarise the data by **County** in the rows and **Products** in the columns. Use **Sales Volume** as the value to be summarised.

Step 2: Use the SWITCH Function

In a new column next to your data, use the SWITCH function to categorise products based on **Sales Volume** as follows:

- For sales greater than 600: **"High"**
- For sales between 300 and 600: **"Medium"**
- For sales less than 300: **"Low"**

SWITCH Function Example:

=SWITCH(TRUE, C2 > 600, "High", C2 >= 300, "Medium", "Low")

- Apply this formula to each row, and check if the products are categorised correctly.

Submission:

- A completed Pivot Table summarising sales by county and product.
- A new column in the dataset categorising products by sales volume using the SWITCH function.
 - Please paste your completed work below

Print screen 1

Row Labels		Sum of Sales Volume			
Cornwall		1100			
Laptops	700	County	Product	Sales Volume	Switch
Printers	400	Yorkshire	Laptops	500	Medium
Durham		550		Yorkshire	Smartphones
Laptops	250	Cornwall	Laptops	700	High

Grand Total		5200			

Day 3: Task 3

Please download the dataset 'Day_3_Task_3_Bike_Sales_Visualisations_Lab.xlsx' from [here](#).

The lab instructions can be found [here](#). Do not worry if you do not complete the lab, just working with data and playing with the charts will be a good experience.

Please paste your results below:

Print screen 1

Day 4: Task 1

You have been asked to deliver your analysis findings to the board of directors, with your analysis you have identified that customers are leaving your company at the 12-month point, this is typically when they receive their renewal price.

Conduct research and complete the below questions:

How would you prepare for the delivery?	Firstly, I need to know my audience. I will familiarize myself with the board members and tailor my presentation to their needs. Secondly, I will need to include a clear summary of the findings, highlighting the peak employee-turnover rate at the 12-month mark correlating it to the renewal pricing. Then, I will need to structure my presentation by including an introduction, a clear and concise showcase of the findings, an analysis of the potential reasons behind the problem, and recommendations to eliminate it. I must include visuals like charts and graphs to help visualise the trends and data points clearly. Finally, I will practice my presentation multiple times and anticipate potential questions. I will be ready to answer said questions to the best of my abilities and offer to discuss further after the presentation.
What tools would you use for the delivery?	I will need to use: <ol style="list-style-type: none">1) Excel (manipulate the data and create my visualisations and dashboard)2) PowerPoint (Structure the work from Excel into a presentation with a beginning, a middle, and an ending.)
What is prospecting and why would you complete this before your delivery?	Prospecting refers to the process of identifying the issue I have been tasked with solving. I will need to request data from the company, send out surveys and questionnaires, and look into the company policies. By doing so, I will be able to build a strong dataset that will be used to create visual aids. All that will help me convey the problems to the stakeholders.
Tell me best practices for public speaking and providing	Not to rumble. Have a structured speech. Be engaging and make eye contact, one thought-one look.

updates to senior leaders	Practice my presentation. Know my content.
What will you show the board in your delivery?	<ol style="list-style-type: none"> 1) A concise summary with the purpose, the key findings, and the proposed actions. 2) I will go in depth with my findings using graphs, charts and/or interactive dashboard. 3) Highlight the deeper problems caused due to the employee turnover. 4) Offer suggestions for change and call the stakeholders to act.
How will you articulate the changes that are needed?	With a clear, logical, and persuasive approach. Need to be able to convey my messages to everyone but at the same time manage to get the stakeholders to understand and take action.
Provide a list of online resources and videos that will support your preparation for public speaking	<ol style="list-style-type: none"> A) https://youtu.be/xSp78RwcAS4?si=eW4pUxYRD0sHggLz B) https://youtu.be/AykYRO5d-II?si=SZk-EvY8s70JVnoh
<p>Evaluate tools that provide visualisation.</p> <p>Tell me what they are.</p> <p>Tell me what you would choose when delivering your presentation and why</p>	<p>Microsoft Excel.</p> <ol style="list-style-type: none"> i) Used to import and manipulate data. ii) Create graphs and visual aids to help with the presentation. <p>Microsoft Powerpoint.</p> <ol style="list-style-type: none"> I) Take my data and structure it into a coherent presentation with a final message,

Course Notes

It is recommended to take notes from the course, use the space below to do so, or use the revision guide shared with the class:

We have included a range of additional links to further resources and information that you may find useful, these can be found within your revision guide.

END OF WORKBOOK

Please check through your work thoroughly before submitting and update the table of contents if required.

Please send your completed work booklet to your trainer.
